

Infrastructure does not need more talk. **It needs execution.**

Helexion Projects takes real infrastructure opportunities and coordinates the structure, partners, documentation and delivery pathway needed to move them toward execution.

INSIDE

- How we work
- What we deliver
- The development workflow
- Sectors & track record
- How it fits together

Strong projects move faster when the development pathway is clear.

A project in a government plan or donor strategy carries real potential. Coordinated development turns that potential into momentum.

THE OPPORTUNITY

A recognised need with a sponsor, a site and real implementation potential.

THE POTENTIAL

Ready to be matched with the right team, financing logic and procurement route.

WITH COORDINATED DEVELOPMENT

Stakeholders aligned, a clear mandate, a financing logic and the documentation to move toward procurement.

THE OUTCOME

From real opportunity to executable mandate — ready to advance.

THE POINT

Surfacing opportunities is the Helexion platform's role. Helexion Projects does the development and coordination work that comes next — entering early, at the development stage.

Lead. Coordinate. Structure. Advance.

Four functions that carry a project from a recognised need to a route to execution.

LEAD

Set the development pathway

Establish the route and move the project forward — from fragmented opportunity to a defined path to execution.

COORDINATE

Align every party

Bring agencies, funders, engineers, developers and local partners into one coherent process.

STRUCTURE

Make it bankable

Define the mandate, delivery model, financing logic, procurement path and risk allocation.

ADVANCE

Move it through execution-readiness

Manage documentation, milestones, counterparties and the workstreams that carry a project toward delivery.

Development-oriented services that build the pathway.

Clearly defined, operational deliverables — with a low-commitment way to begin.

Mandate Formation

Scope and terms, starting with a short Development Diagnostic — a 3–5 page memo in 7–10 days.

Project Development Plan

Scope, delivery model, financing route, procurement path and timeline.

Stakeholder & Consortium Coordination

Align agencies and funders; organize the delivery consortium.

Technical & Commercial Structuring

Delivery model, financing logic, procurement path and risk allocation.

Funder & Partner Documentation

Funder-facing narrative and documentation focused on capital-readiness for DFIs, donors, banks and climate funds.

Development Management / PMO

Coordination, milestones, reporting and risk monitoring through execution.

Every stage produces a defined output.

A disciplined path from opportunity to execution — each step moving the project closer to bankability and delivery.

Execution & PMO

Delivery framework

Where climate adaptation meets deliverable infrastructure.

Priority sectors where public need, adaptation urgency and infrastructure gaps converge.

Water

Desalination, treatment, irrigation and municipal water resilience.

Energy

Solar, storage, mini-grids, hybrids and facility electrification.

Ports & Logistics

Port resilience, cold-chain, export infrastructure and free zones.

Climate Adaptation

Flood protection, coastal resilience, drought and heat response.

Public Infrastructure

Hospitals, schools, municipal facilities and public-service assets.

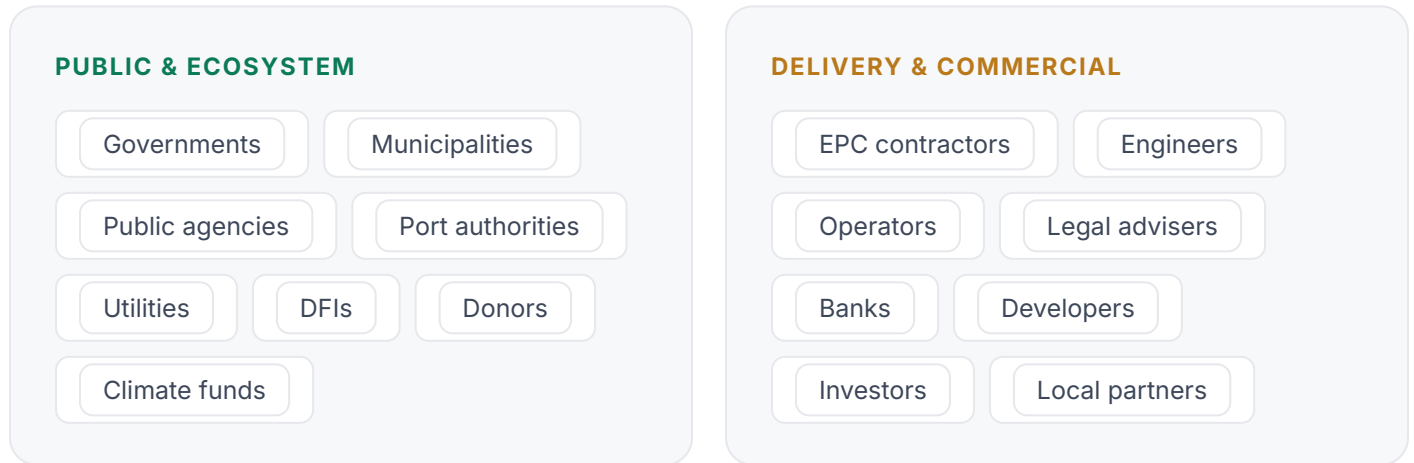

Agriculture & Food Security

Irrigation, storage, processing, agri-zones and export corridors.

Between the people who own, deliver and fund projects.

We sit at the centre, coordinating across the whole delivery landscape.

Project owners · delivery partners · capital & funders — coordinated into one process.

Relevant project experience.

Selected development, structuring and execution-readiness experience across infrastructure sectors.

Ghana · Solar

50MW solar development pathway — structuring and partner documentation.

Kenya · Water

Municipal water treatment financing structure and stakeholder alignment.

Zambia · Infrastructure

Export-linked infrastructure and jobs-focused delivery model.

NOTE

Examples reflect development, structuring or partner-supported experience. Helexion Projects' role is development coordination and execution-readiness; specific roles and references are available on request.

One ecosystem, three connected parts.

Three initiatives that reinforce each other — with a clear separation that protects platform neutrality.

Helexion

The platform surfaces adaptation and infrastructure opportunities. It stays neutral.

Helexion Projects

Coordinates development — turning selected opportunities into execution-ready mandates.

AquaVolt Capital

Supports financing strategy and capital-structure analysis where appropriate, subject to legal and regulatory review.

WHAT WE DO NOT DO

Helexion Projects does not act as a broker-dealer, investment adviser, placement agent or capital raiser. We coordinate development, documentation, stakeholder alignment and execution-readiness so qualified projects can move toward procurement, financing review and delivery. It remains a separate arm — engagement is never required to use the Helexion platform.

Coordinated development turns potential into delivery.

What you get when the right parties, structure and pathway come together.

Faster path to bankability

A clear pathway and documentation that move a project toward financing review, procurement and delivery.

Coordinated delivery

Agencies, funders and delivery partners aligned into one process.

Integrity built in

Conflict-of-interest, sanctions and procurement transparency in every mandate.

IN ONE LINE

Infrastructure potential → structured, bankable, execution-ready projects.

Have a real project to move forward?

Send us the project location, sponsor, sector, current status and immediate development need. If there's a viable pathway, we'll propose a short Development Diagnostic or a mandate discussion.
